

SoulBound Tokens for Hackathon

Biz team

The conception

- This project is the progenitor of Vitalik Buterin and his team's concept and some of the most committed people participate in it, in our opinion. To preserve the history, to create a reputation for the participants and those who contribute to the development of this concept, the idea to create an SBT arose.
- To do this, we created a project, the idea of which is that participants under the names of their teams entered their wallet addresses in the form(site) and made a note of the privacy of their future SBT.

How it works

01

Filling the form

Team leaders are filling the form on website

02

All forms are collecting in database

As a JSON - files

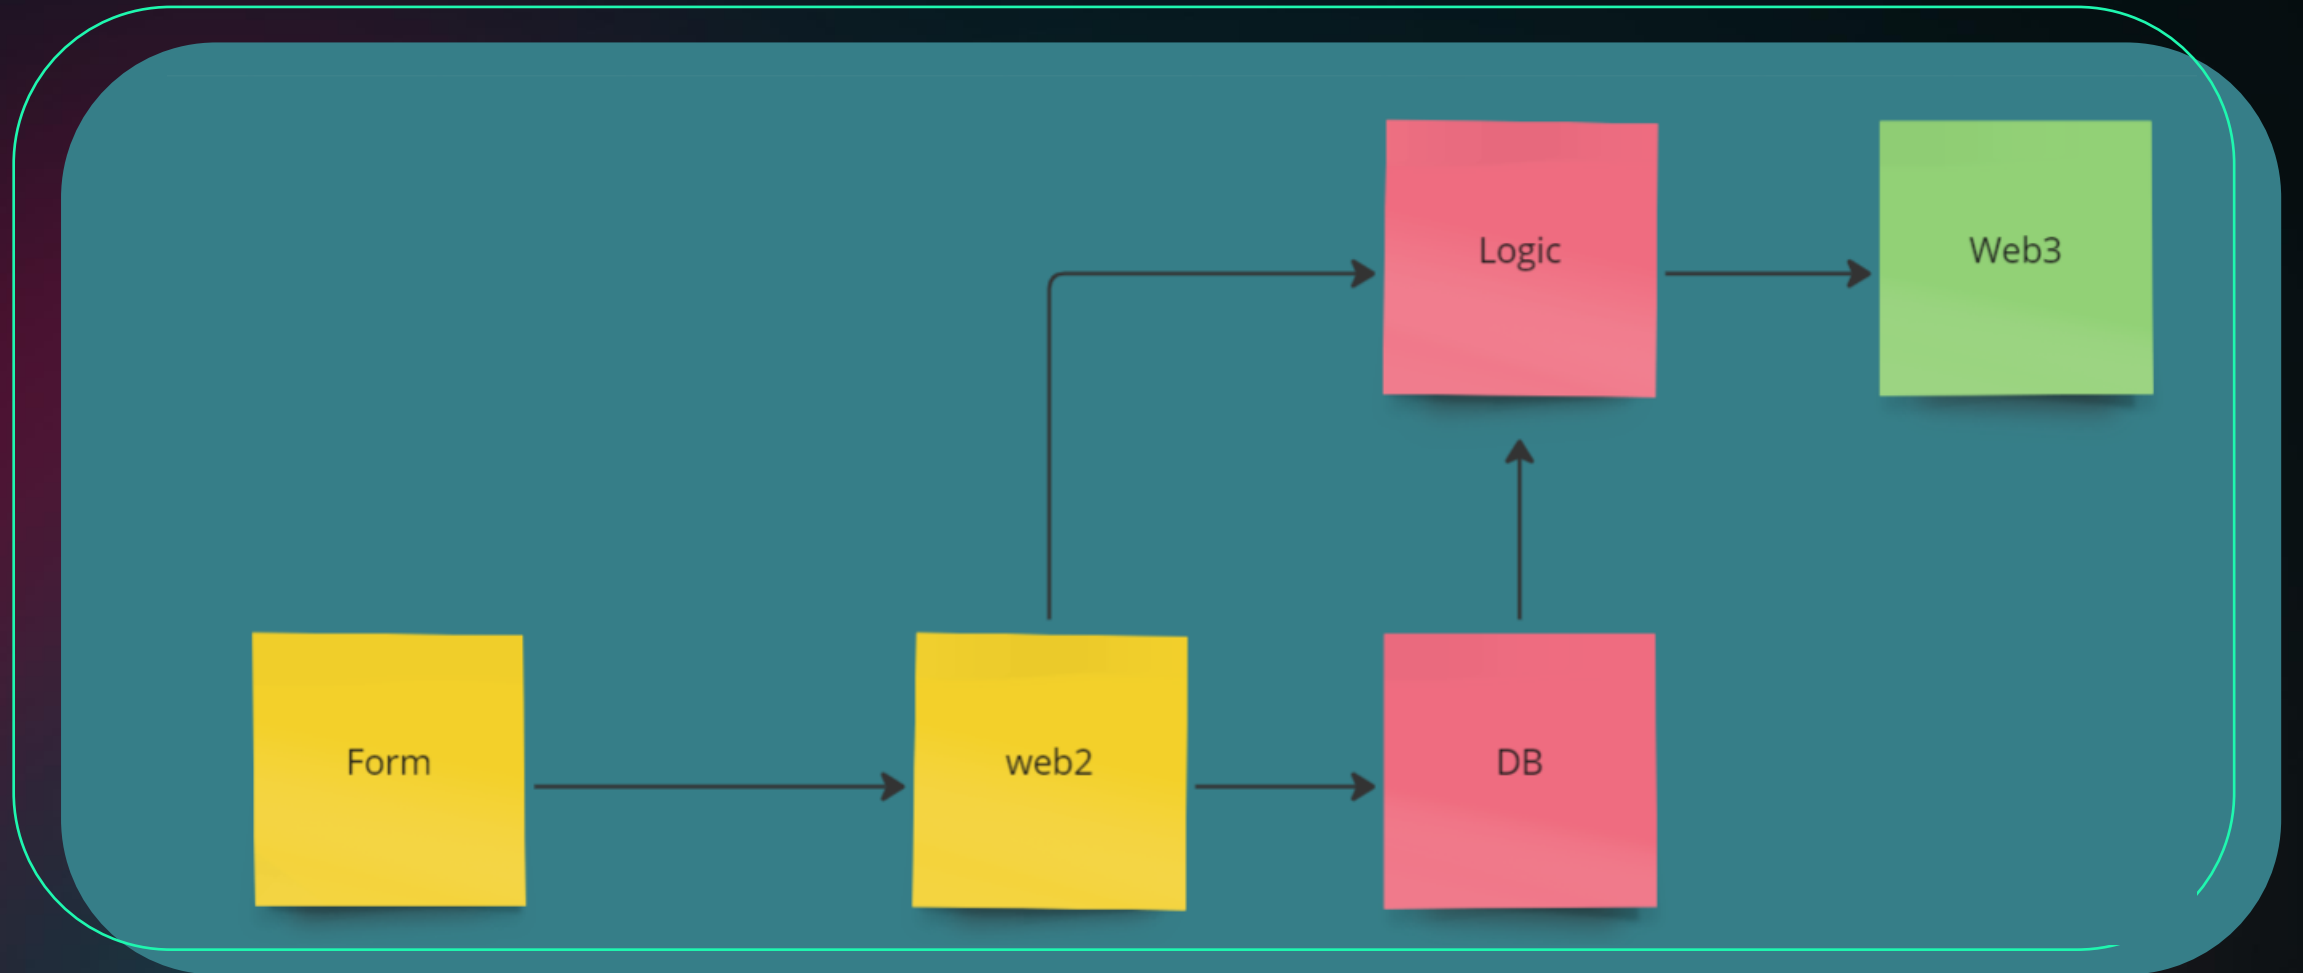

03

Organizers are deploying NFT

04

Request to DB and mint tokens to all participants

Here is the architecture of the project

The form

- Team name ----->
- Here are the addresses of each member of team (max 5)----->
- Here are the links of your project----->

Team name
